

**AMENDMENTS TO THE CLAIMS**

In accordance with the PTO's amendment format, a detailed listing of all claims has been provided. A status identifier is provided for each claim in parentheses following each claim number. Changes to the claims are shown by strikethrough or double bracketing (for deleted text) or underlining (for added text).

**In the Claims:**

Claims 34 and 37-40 were previously pending.

Claim 34 is allowed.

Claim 37 is currently amended.

Claims 39-40 are canceled.

Claims 34 and 37-38 are currently pending.

Listing of the Claims

1-33. (canceled)

34. (Allowed) One or more computer storage media containing instructions that, when included in an application executed by a computing system provide and manage a generic interface between a generic data source and a displayed list of items from the generic data source, a configuration and an appearance of the displayed list being determined by selections from an original equipment manufacturer (OEM) graphical user interface (GUI) software, wherein the instructions perform the following steps:

receiving the selections from the OEM GUI software to determine the configuration and the appearance of the displayed list;

accessing the generic data source that contains one or more of the items;

populating the displayed list with the items from the generic data source according to one or more scrolling events received;

wherein the OEM GUI software is configured independently of the one or more media; and

wherein the instructions are executable on different computing platforms and in different applications to provide the displayed list.

35-36. (canceled)

37. (Currently Amended) A system, comprising:

a computer processor;

a display communicatively coupled with the computer processor;

a memory communicatively coupled with the computer processor, wherein

the memory is capable of storing:

1 an original equipment manufacturer (OEM)-selected application to  
2 be executed by the computer processor;

3 a data source accessible to the OEM-selected application; and

4 an OEM-provided software that selects a configuration and an  
5 appearance of a list of data items from the data source to be presented on the  
6 display;

7 a list manager capable of being added to the OEM-application and  
8 providing an interface between the data source and the list;

9 wherein the list manager receives the configuration and the  
10 appearance from the OEM-provided software, accesses the data source, and  
11 populates the list of data items according to the configuration and the appearance;

12 and

13 wherein the list manager is capable of residing on various systems  
14 using various computing platforms and wherein the list manager is capable of  
15 being added to various applications.

16 38. (Previously Presented) The system as recited in claim 37,  
17 wherein the list manager further populates the list of data items according to a  
18 scrolling event.

19 39-40. (Canceled)
